

The Living Rainforest in Newbury, Berkshire is a tropical rainforest-inspired ecological garden and visitor centre. ABA&E's clear and imaginative proposal was the winning submission in a competition for designing the most sustainable tropical greenhouse in Europe, housing a world class visitor centre.

The project was designed for a modern structure to incorporate both an Advanced Timber Construction and Photovoltaic Solar Cell Technology.

The structural form has been designed to allow replication in future, larger projects. The square plan form allows infinite multiplication of the basic dome structure to form larger squares and rectangles.
